PROJECTS

1. Personal Voice Assistant using Python:

Developed a personal voice assistant capable of executing voice commands to perform tasks such as setting reminders, opening applications, & searching the web. Utilized Python libraries like Speech Recognition to build an interactive & user-friendly voice interface.

2. Feedback Analysis Using LSTM:

Built a sentiment analysis system using LSTM to classify & interpret student feedback. The model accurately processed sequential data to uncover insights, aiming to improve educational outcomes through automated, data-driven evaluation.
